DETAILED ACTION

Response to Amendment

The amendment filed on 5/30/2006 has been entered.

Claim Objections

Claims 1-7 are objected to because of the following informalities:

Regarding independent claim 1, it is unclear whether "normal red, green or blue resonated light" is normal to the substrate or the first portion of predetermined emitting area.

Also, for same reason, "substantially unfiltered red, green or blue normal light" being normal to the second portion of predetermined emitting area or the substrate is unclear. Appropriate correction is required. Claims 2-7 are objected to due to claim dependency.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Boroson (US 2005/0225232).

Regarding claim 1, Boroson discloses an OLED device (figure 7) formed on a substrate (100), comprising: a light emitting layer (210) arranged to produce light having a portion that is normal to the substrate in a predetermined emitting area; a reflector (220) and a semi-transparent reflector (120a-120d) forming microcavity structure (paragraph 32) for resonating the light

Art Unit: 2879

produced in the light emitting layer to provide red, green, or blue light (paragraph 112); and a color filter element (301a-301c) disposed relative to a first portion (the portion where the filters are placed) of the predetermined emitting area so as to filter normal red, green or blue resonated light and transmit substantially unfiltered red, green or blue normal light through a second portion (the portion where the filters are not placed) of the predetermined emitting area.

Regarding claim 2, Boroson discloses the reflector and the semi-transparent reflector serve as electrodes for light emitting layer (paragraph 33).

Regarding claim 3, Boroson discloses the semi-transparent reflector is Ag or an Ag alloy (paragraph 31).

Regarding claim 4, Boroson discloses the device is top emitting (figure 5).

Regarding claim 5, Boroson discloses the device is bottom emitting (figure 7).

Regarding claim 6, Boroson discloses the color filter elements (figure 7, 301a-301c) include striped filtered portions (figure 7, into the page).

Regarding claim 7, Boroson discloses the color filter element (figure 7, 301a-301c) includes openings (two openings between 301a and 301b, and 301b and 301c) in the color filter element to provide the unfiltered light (figure 7, the emitted light will pass through the openings which will not be filtered).

Regarding claim 8, Boroson discloses a multicolor OLED device (figure 7) having a substrate (100) and an array of pixels (not shown) formed on the substrate that includes different subpixels (55a-55d) that emit different color light (30a-30d) wherein at least one subpixel comprises: a light emitting layer (210) arranged to produce light having a portion that is normal to the substrate in a predetermined emitting area, wherein the light produced by each subpixel is

Application/Control Number: 10/820,592

Art Unit: 2879

a different color (paragraph 112); a reflector (220) and a semi-transparent reflector (120a-120d) forming a microcavity structure (paragraph 32) for resonating the light produced by each subpixel is a different color; and a color filter element (301a-301c) disposed relative to a first portion (the portion where the filters are placed) of the predetermined emitting area so as to filter the normal light and transmit substantially unfiltered normal red, green or blue light through a second portion (the portion where the filters are not placed) of the predetermined emitting area.

Regarding claim 9, Boroson discloses the subpixels produce red, green, and blue light (paragraph 112).

Regarding claim 10, Boroson discloses the reflector and the semi-transparent reflector serve as electrodes for light emitting layer (paragraph 33).

Regarding claim 11, Boroson discloses the semi-transparent reflector is Ag or an Ag alloy (paragraph 31).

Regarding claim 12, Boroson discloses the device is top emitting (figure 5).

Regarding claim 13, Boroson discloses the device is bottom emitting (figure 7).

Regarding claim 14, Boroson discloses the device further comprises active matrix circuitry (figure 7, 110) to drive the subpixels.

Regarding claim 15, Boroson discloses the color filter elements (figure 7, 301a-301c) include striped filtered portions (figure 7, into the page).

Regarding claim 16, Boroson discloses the color filter element (figure 7, 301a-301c) includes openings (two openings between 301a and 301b, and 301b and 301c) in the color filter element to provide the unfiltered light (figure 7, the emitted light will pass through the openings which will not be filtered).

Response to Arguments

Applicant's arguments filed on 5/30/2006 have been fully considered but they are not persuasive. Regarding the argument about Boroson not disclosing unfiltered light, the Applicant argues that Boroson does not disclose unfiltered light. The Examiner disagrees. The light generated by organic layers 210 will be transmitted through the glass substrate 100, and the area where the filters 301a 301b 301c are located, the lights will be filtered and the area where the filters are not located, the lights will be unfiltered regardless of the light being unwanted or wanted. Also, both the filtered and unfiltered light are normal to the substrate. The Examiner understands the Applicant's position on the argument having difference between the Applicant's inventive subject matter and the device disclosed by Boroson, however, the amended claimed apparatus cannot be distinguished over the prior art of Boroson as shown in 35 U.S.C. 102 rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Application/Control Number: 10/820,592

Art Unit: 2879

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Contact information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bumsuk Won whose telephone number is 571-272-2713. The examiner can normally be reached on Monday through Friday, 8:00 am to 5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nimeshkumar Patel can be reached on 571-272-2457. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
